## Beyond the Bench: Designing an Integrated Undergraduate-to-Entrepreneurship Pathway in Biopharmaceutical Sciences

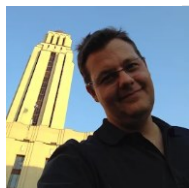

1 Luglio 2026 ore 11.00

Università degli Studi di Ferrara  
Dipartimento di Scienze Chimiche, Farmaceutiche ed Agrarie - **Aula D5**  
Via L. Borsari 46, Ferrara

### ABSTRACT

Many research trainees in the life sciences are curious about how discoveries move forward after publication—through clinical development, regulatory evaluation, and ultimately patient care. For pharmaceutical scientists, understanding this broader process can open new research perspectives and career paths. For principal investigators, it can also strengthen the positioning, valorization, and societal impact of their research programs.

This talk will illustrate our experience in developing educational activities that make this continuum more visible—from programs built around the integrated drug development continuum and graduate outcome analysis to entrepreneurship workshops and the international Summer School on Medicines—and will present practical examples that help connect laboratory research with the realities of drug development and innovation.
